ò g hypothetical protein - Deinococcus radiodurans (strain R1)

```
Cispecies: Salmonella enterica subsp. enterica serovar Typhi
A;Note: this species has also been called Salmonella typhi
C;Date: 09-Nov-2001 #sequence_revision 09-Nov-2001 #text_change 18-Nov-2002
C;Accession: A40523

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      JQ1987

hypothetical 21.0K protein - turkey rhinotracheitis virus (strain UK/3BV/85)

N/Alternate names: ORF 1 protein

C;Species: turkey rhinotracheitis virus

C;Species: turkey rhinotracheitis virus

C;Species: turkey rhinotracheitis virus

C;Species: 101983 #sequence_revision 20-Aug-1994 #text_change 28-May-1999

C;Accession: JQ1987

Mol. REPROG. Dev. 34:1-7(1933).
-!-FUNCTION: ONE OF THE FIRST GENES TO BE TRANSCRIBED DURING MOUSE
DEVELOPMENT, MAY FLAY SOME GENERAL FUNCTION.
-!-SUBCELLULAR LOCATION: Cytoplasmic (Potential).
-!-DEVELOPMENTAL STAGE: TRANSCRIBED DURING BARLY MOUSE DEVELOPMENT.
DETECTED AT ALL DEVELOPMENTAL STAGES FROM THE EGG THROUGH THE
BLASTOCYT, MOST ABUNDANT AT THE 2-CELL STAGE.
-!- SIMILARITY: Belongs to the Mo25 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;
